The freedom to add space without waste...

Flexiunit™ Server Cabinets (Patent Pending) are low cost, full featured cabinets that utilize a shared upright concept to save money and space. Sharing of the upright between adjacent cabinets saves approximately 32% of the cost, plus 2 inches per additional cabinet. Begin with an open Starter Cabinet. Expand with as many Add-On Cabinets as needed, and if required you can complete your cabinet system with locking mesh doors, vented top panels, fan kits, shelving and numerous horizontal and vertical cable management accessories. Universal mounting plates are also available which provide the ability to attach virtually any accessory to your Flexiunit™ Cabinet System. Based on its flexibility and price point, the Flexiunit™ is the perfect cabinet system for any size data center.

Open Starter Cabinet

Start with an Open Starter Cabinet available in 36" or 42" depth.

Open Add-On Cabinet

Add as many additional bays as you need using Open Add-On Cabinets.

Enclosures & Accessories

Complete your cabinets with side panels, mesh doors, vented tops, fan kits, shelves and cable management accessories.

Full Featured High Capacity Cabinet

The Flexiunit™ provides the benefits generally expected from much more expensive cabinet systems.

- Numbered Rackmount Rails to Assist in Equipment Placement and Organization
- 42 U's of Rackmount Space
