

Tap Extractor Kits

Walton™ tap extractor kits are available in six size variations. All parts including holders, collars, and sleeves are packed in a custom made sturdy plastic molded case. All parts come with Walton's lifetime guarantee.

Standard Sets No. 4, 5, 6 packed in 15 compartment plastic case.

Standard Sets No. 1, 2, 3 packed in 6 compartment plastic case.

Tap Extractor Instructions

Remove Broken Taps in 3 Easy Steps:

1. Thoroughly remove all chips of the broken tap. Insert the extractor fingers into the flutes of the broken tap, pushing them gently but firmly into position.
2. Push the holder down until it touches the broken tap. Slide the sleeve down until it touches the work. (Both are important).
3. Apply a tap wrench to the square end of the holder. Twist forward and backward a few times to loosen, then back out of the broken tap.

The Walton™ Tap Extractor (holder, collar and sleeve) Is Guaranteed Indefinitely Against Breakage

All broken holders, collars and sleeves will be replaced, without charge, when mailed to us. When fingers become bent or broken, or are too short for further use, replacement fingers may be obtained from your local dealer. We will be glad to suggest names in your area. Parts lost may be replaced by you. Prices of all parts are in our price list.

Tap Extractor Parts

WALTON™ Ergonomic File Handle for Comfortable Production Filing

The Walton™ Ergonomic File Handle's design incorporates the natural wrist angle of approximately 35 degrees. The handle is constructed such that the tool's axis is better aligned with the forearm, significantly reducing muscle fatigue. It allows the operator to rotate the arm slightly to change the angle of the file, while still applying the necessary pressure to keep the file in contact with the work piece. Studies show that even repetitive filing jobs have become more comfortable, safe and efficient as a result of this design.

The grooved surface of the Walton™ Ergonomic File Handle provides a perfect non-slip grip for the hand. Its slightly bulging midsection is cradled comfortably in the palm of even a small hand.

Instructions:

Insert the file tang into the lateral hole closest to the end of the aluminum handle. If the tang protrudes through the soft grip, you must grind off enough to allow it to go through the aluminum only (so that it is held securely in place), but not so far as to injure the operator's hand. Next, alternately tighten the internal screws to lock the file into the handle.

Protect your workers while making them more comfortable and efficient...TODAY!
